PROFESSIONAL SUMMARY

Second-year B.Tech (AI) student at Newton School of Technology. 7+ deployed full-stack and AI applications using React, Node.js, PostgreSQL, and LangGraph. Solved 500+ LeetCode problems including 100+ Hard. Interested in clean system architecture, AI pipelines, and production-grade engineering.

EDUCATION

Bachelor of Technology (Artificial intelligence)
Newton School Of Technology ,Rishihood University

2024 - 2028
Grade: 6.75/10.0

PROJECTS

InterviewIQ — AI Mock Interview SaaS ([Github](#)) ([Demo](#)) March 2026

- Built a 3-step interview flow with resume PDF parsing (pdf.js, capped at 3,000 chars), voice-to-text via Web Speech API, and real-time answer scoring (confidence, communication, correctness) using OpenRouter LLM — 9 Vercel production releases
- Integrated Razorpay credit-based billing with atomic server-side deduction before LLM call to prevent double-spend; Google OAuth auth; Recharts score breakdown with PDF report download

TelecomIQ — ML + Agentic AI Churn Prediction ([Github](#)) ([Demo](#)) January 2026

- Trained XGBoost on IBM Telco dataset (7,043 rows, 21 features) with stratified 80/20 split and scaleposweight=2.77 to correct 73/27 class imbalance; benchmarked 4 classifiers and selected final model by F1, not accuracy.
- Fixed data leakage from duplicate target column that inflated training F1 to 1.0; routed predictions through LangGraph agent → FAISS RAG → Groq LLaMA 3 explanation on Streamlit; received 1 GitHub star and 1 fork.

Ticket - Booking ([Github](#)) ([Demo](#)) January 2026

- Developed a full-stack role-based booking system using Next.js, React, Node.js, Express, MongoDB, and Passport.js with secure authentication and session management.
- Built RESTful APIs for booking creation, availability management, and conflict prevention ensuring zero double-bookings; enforced Admin/Provider/User RBAC with protected, modular backend routes.
- Designed a MongoDB schema for optimized query performance; deployed on Vercel (frontend) and Render (backend).

SmartFlow — Full-Stack Task Management System ([Github](#)) ([Demo](#)) December 2025

- Implemented Strategy pattern to make Kanban sort pluggable (DeadlineBasedStrategy scores tasks as 100/daysUntilDeadline; WorkloadBasedStrategy as workload x priorityWeight); Observer pattern via TaskEventManager decouples task mutations from toast, progress, and dashboard widgets — 23 Vercel deployments
- Configured Prisma ORM on NeonDB PostgreSQL with JWT + Google OAuth 2.0 and Zod validation across a fully typed React to Express to Prisma to PostgreSQL stack

SKILLS

Computer Languages: Python, TypeScript, HTML, CSS, JavaScript, SQL

Data Tools: TensorFlow, PostgreSQL

Software Packages: Pandas, Next.js, Tailwind CSS, Prisma ORM, React, Redux, Node.js, Scikit-learn, Keras, Express JS, MySQL, MongoDB

Others: Git and Github, LangChain, OpenAI API, GitHub Actions, Supabase

EXTRA-CURRICULAR ACTIVITIES

Model United Nations — policy drafting and public speaking · Event Lead, Cultural Week and Sports Day
